

TIPS FOR USING WITH CUTTING MACHINE- Small Flowers

When using these template files with a cutting machine there are 2 options to pick from, SVG or PNG image. If you should need a DXF for Silhouette I can provide upon request, but please try the SVG or PNG first. 😊

It is important to note the following two things:

- The SVGs and/or PNG image will not always upload to cutting machine software in the same size that I saved the templates as in my own designing software. Each cutting machine software reads files differently and therefore uploads various sizes.
- For most of my small flower designs you use 4-6 petal layers. I usually lay out 6 petal cuts filling up an 8.5x11 page will give you about a 4 inch flower for the most part.
- You can look in the description of each of the Youtube video tutorials to see the exact measurements to input to achieve the correct flower look.
- View how to stem a paper flower here: <https://www.youtube.com/watch?v=W4loaMoK26w>
- If you need further help please just message me. I will get back to you as soon as I am able to do so. 😊
